

GENERATOR SAFETY

USE BACKUP POWER SAFELY

When used properly, portable and standby generators are a great option to provide backup power during brownouts or blackouts.

Learn how to use generators safely with the following tips:

GENERATORS

Location

20 ft

Always keep generators at least **20 feet away** from your home

Never operate a generator in an **enclosed space**

Make sure the generator has **3-4 feet** of clear space above and on all sides for proper ventilation

Keep generators **away** from doors, windows, and vents

Always **direct exhaust away** from your home

Use

Always use **grounded cords** and inspect cords for damage prior to use

Use the **proper cord** for the wattage being used

Always use **GFCI protection**

Make sure to start / stop generators when **no electrical loads** are connected

Keep generators **dry, do not operate when wet**, and refuel when cool

Do not overload generators

Do not plug a generator directly into your home, connect items being powered **directly to the generator**

TRANSFER SWITCHES

Transfer switches, whether manual or automatic, allow you to choose between **utility power** or **backup generator power**

Transfer switches are the only way to **safely power** your home's electrical system

Using a transfer switch **prevents backfeeding**. This occurs when your generator becomes a power source for the **surrounding area** and can damage your home, your neighbor's homes, and injure workers trying to restore power

CARBON MONOXIDE (CO) POISONING PREVENTION

Improper use and installation of generators could **cause CO poisoning**

Make sure your home has **carbon monoxide alarms** outside each sleeping area and on every level of the home

CO can kill in as little as **5 minutes**

Symptoms of CO poisoning

Dizziness

Headaches

Nausea

Tiredness

If you experience CO poisoning symptoms, **get fresh air, do not reenter areas**, and **call 911**.
